Key word

- Artefact: the word we use for all the things we find that tell us about the past.
- 1. Look at all the pictures on page 2.
- 2. Try to put them in common groupings you need at least 3 to make a group.
- 3. Write down the numbers of the types of transport that make up your group.
- Think of a name for your group DO NOT TELL ANYONE THE NAME YOU HAVE CHOSEN.
- The other people on your table try to guess what name you have given your group.
- 6. The person who guesses correctly is the next person to choose a group. edudestuk
- edudestu IMPORTANT – one artefact can be in many groups! edudest

Picture Description of what it was	Description of what it did
<ul> <li>The cart was a large tray made of wood on wheels.</li> <li>The wheels were wooden and had a metal rim to keep them together and stop them wearing down.</li> <li>It went on the road.</li> <li>Roads went everywhere so everyone could use this type of transport.</li> </ul>	<ul> <li>If the cart was small then it was easy for the horse to pull but it could not carry very much.</li> <li>If the cart was large then it could carry lots but it needed many horses which was expensive.</li> <li>The cart had narrow wheels and these cut up the road. When the road was uneven the things in the cart got thrown about and</li> </ul>

<ul> <li>the canal did not move because WWW.edudest.uk</li> <li>The barge could uavel equally easily in either direction. Tunnels and cuttings were made to keep the canal level.</li> <li>By 1800 the main industrial cities were connected by canal to London.</li> <li>The barge was pulled by a horse so it was the same speed as a man walking: 4 miles per hour.</li> <li>A railway had rails that were laid over flat ground. Tunnels and cuttings were made to keep the railway level.</li> <li>By 1900 almost all towns and cities were connected by railways.</li> <li>Steam engines could travel at 40 miles per hour.</li> <li>The engine could pull lots of carriages at once carrying different things; people goods, and animals.</li> <li>The carriages were able to carry much more than either a cart or</li> </ul>	<ul> <li>It could carry ten times as much as a cart. This was a big improvement, especially for people living in towns.</li> <li>Also the barge moved smoothly, so nothing got broken.</li> <li>However most towns were not on a canal so this transport did not help them.</li> <li>Then in winter if the canal froze the barges could not move. It was only for carrying goods not people. It was slow.</li> <li>Railways were a transport revolution. The speed people could travel had not increased since Roman times i.e. 2500 years.</li> <li>Because people could travel ten times faster they could go ten times further in the same time.</li> <li>Railways were the first type of transport that helped <u>people</u> as well as goods move. Railways could carry ten times as much as a barge or one hundred times as much as a cart. Therefore railways reduced the cost of transport so goods became cheaper.</li> <li>This meant the quality, the quantity and the variety of goods increased</li> </ul>
<ul> <li>a barge.</li> <li>The hull of this vessel - a paddle steamer - was similar in shape to sailing boats, but it had paddles at each side.</li> <li>They were turned by a steam engine so it did not need the wind to get to its destination.</li> <li>This made it possible for paddle steamers to run to a timetable.</li> <li>They could travel at 10 knots which is about 11 miles per hour.</li> <li>Like all vessels they could carry anything; people, goods, animals and even very large things like vehicles.</li> </ul>	<ul> <li>so people lived longer. It was fast.</li> <li>Paddle steamers were a big step forward in water transport.</li> <li>In simple terms paddle steamers did on water what trains did on land.</li> <li>It could carry as much as a train.</li> <li>Paddle steamers allowed people to travel for work and pleasure in a way that had never been possible before.</li> <li>It was fast.</li> <li>It was big so people could travel in luxury.</li> </ul>

#### www.edudest.uk

Then, complete some research into this period of transport development.

Think about the key question:

ASK

What were the main developments in transport in the nineteenth century?
