Unusual and Exotic Zoo

Amazon World is no ordinary zoo - it is packed with a huge range of unusual rare and exotic animals - around 200 different species spanning the entire animal kingdom.

There's no elephants, giraffes or lions here ... but there's plenty of creatures most students probably haven't heard of!

Rainforests & Conservation

Learn about rainforests and conservation, and come face-to-face with some of the world's most endangered creatures - many of which you can't see anywhere else in Europe.

Try to spot the many species of tropical birds flying freely through the rainforest above you, or count the crocodiles in the pond. Or just sit and watch the lemurs at play!

Tapirs, Capybaras, Caiman, Collared Peccary, Douroucoulis, Giant Anteaters, Gray Mouse lemurs, Greater Flamingos, Greater Slow Loris, Kinkajous, Linnaeus's Two-Toed Sloths, Lovebirds, Lowland Pacas, Macaws, Mata Matas, Meerkats, Ocelot, Olive Squirrel monkeys, Parrots, Pygmy Slow Loris, Red Panda, Red Ruffed lemurs, Ring-tailed Coatis, Ring-tailed lemurs, Rhea, Scarlet Ibis, Southern Tamandua, Tamarins, Tortoises, Toucans and White-faced Saki monkeys!

Plus loads of different fish, insects, reptiles, tropical birds and of course the wallaby walkthrough.
